

Battery Clamp

Battery Clamp – Unique, Manual fastener feed system

Description of Application:

Automotive copper battery clamp requiring one M6 stud and one M8 stud.

Customer Requirement:

Install both fasteners in a single handling. Zero defects.

Haeger Solution:

Haeger supplied at dual-bowl and dual-shuttle equipped WindowTouch. The two lower tools are mounted on the Turret Tool. Fastener Detection system ensures a fastener is always in place during the insertion stroke. The part program on the InsertionLogic equipped computer ensures that the proper insertion force is exerted on each fastener.

Customer Benefit:

Single handling of the part with zero defects!
