

## Shulte Dual ABFT

Shulte Dual ABFT (Automatic Bottom Feed Tooling) For Battery Terminals

**Description of Application:**

Nuts being inserted into battery terminals.

**Customer Requirement:**

The ability to dual feed two nuts simultaneously into battery terminals, with a part ejection feature.

**Haeger Solution:**

Haeger's Custom Tooling department designed & manufactured a special dual automatic lower tooling that holds two part assemblies in place for insertion. After insertion, the assemblies are ejected automatically, while the operator prepares to insert terminals for the next insertion.

**Customer Benefit:**

The Customer was able to increase their completed part assembly time by more than 50%.
